Bank and Counter Railings, Partitions, Elevator Enclosures, Wire Signs, Balcony Railings, Theater Rails, Window Guards, Chairs and Settees, Grave Guards, Fencing, Nursery Fenders, Stove Guards, Spark Guards, Summer Houses, Garden Arches, Moss Baskets, Flower Stands, Trainers, Trellises, Tree Guards, Floral Designs, Gravel Screens, Coal Screens, Sand Screens, Miners' Riddles, Foundry Riddles, Grain Riddles, Dog Muzzles, Calf Weaners, Sky Light Guards, Desk Baskets, Cotton Baskets, Barrel Covers, Ox Muzzles, Horse Muzzles, Lemon Box Covers, Parrott Cages, Sponge Racks. Wire Cloth of all meshes and sizes of wire, of steel, brass or iron, japanned, tin plated, coppered, galvanized or plain.

Store Fixtures,

Consisting of Coat Forms, Corset Stands, Dress Forms, plain or padded; Umbrella Stands, Hat Brackets, Handkerchief Stands, Window Fixtures, Store Stools, Coat Hooks, Sponge Baskets, Shirt Stands, Counter Protectors, Jewelers' Guards, Shelf Railing, Shelf Window Fixtures, Cloak Racks, Wire Signs, Show Case Stands, Screen Window Signs, Store Baskets, Store Guards, Counter Supports, Umbrella Stands, Store Stools.

Miscellaneous

Lawn Mowers, Copper Weather Vanes, Poultry Nettings, Galvanized and Plain Twist Fencing, Automatic Drive Gates.

SEND FOR SPECIAL CATALOGUE OF THE SEVERAL CLASSES OF GOODS ABOVE NOTED.

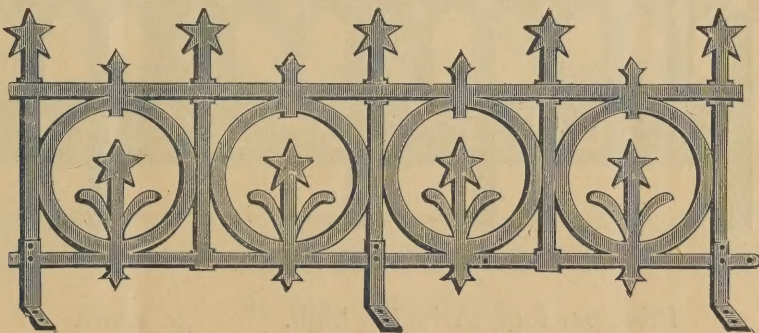

Ornamental Roof Crestings.

NOTHING adds so much to the appearance of a home, in proportion to the expense, as a neat handsome Cresting on the Deck or Roof.

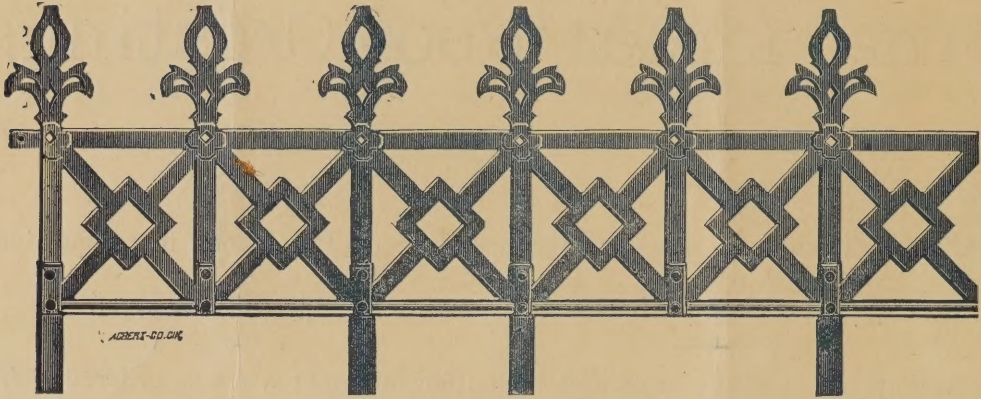

All Crestings are carefully fitted and boxed for shipment when so ordered. *When box and packing are charged for we will be responsible for breakage, not otherwise.*

The principal fault found to crestings by builders, is the breakage of the feet in screwing down the crestings, thus necessitating the loss of the section, as the feet cannot be easily repaired. To overcome this I have introduced a new feature, by using *Wrought Iron Feet*, securely double riveted to the Cresting. These feet cannot be broken, and can be bent to fit any bevel of roof. This feature makes my Crestings superior to any and all others.

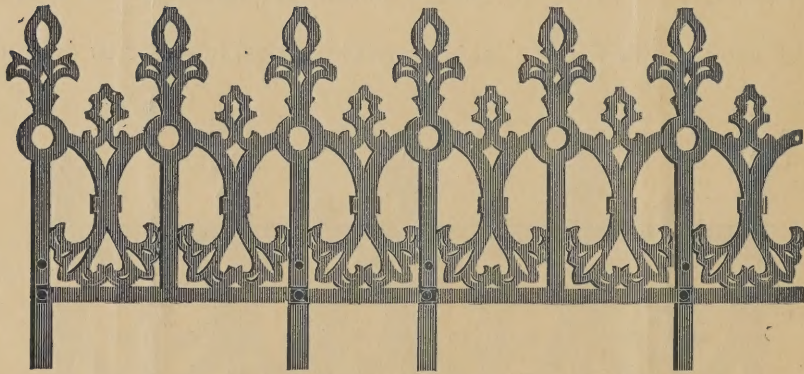

No. 651. CRESTING.

Price per foot, 15 inches high, 28 cents.

No. 652. CRESTING.

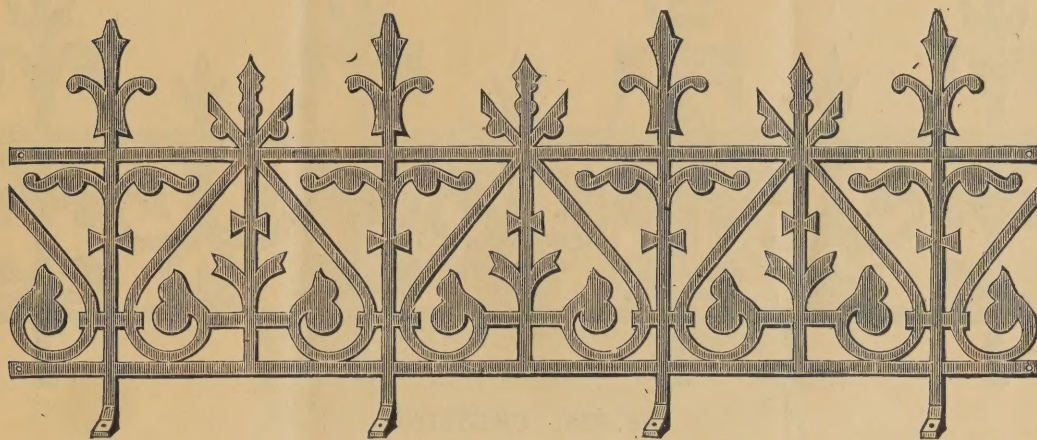

Price per foot, 18 inches high, 30 cents.

No. 653. CRESTING.

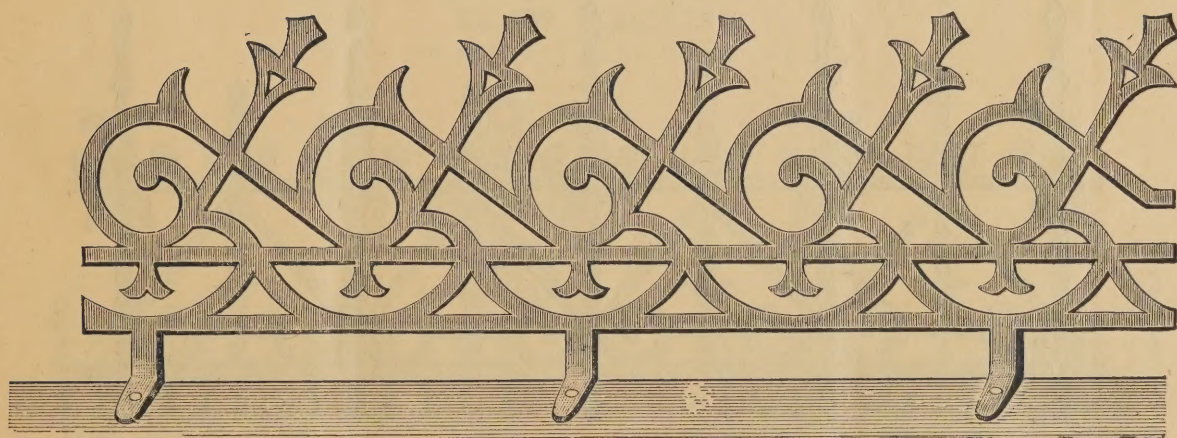

Price per foot, 21 inches high, 35 cents.

All my Crestings have WROUGHT IRON FEET double riveted onto them, which enables one in putting up work to bend them to any pitch of roof, and no sections are lost by breaking off the feet in screwing them down.

No. 454. "Standard" Wire Fence.

Write for prices.

The "Barbee" Single or Walk Gate.

STRONG AND DURABLE.

ORNAMENTAL AND CHEAP.

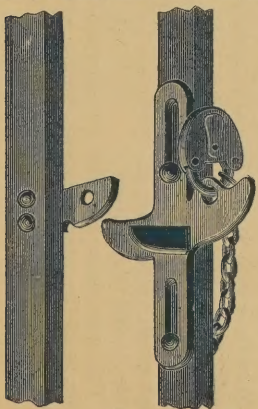

PRICES

No. 10.	For 36 inch fence,	40 inches opening between posts, each	\$4.00
" 11.	" 42	" 40	 4.50
" 12.	" 48	" 40	 5.00

Price includes our heavy malleable iron, patent self closing hinges, spring and catch, as shown in cut, and six heavy lag screws to attach hinges to posts.

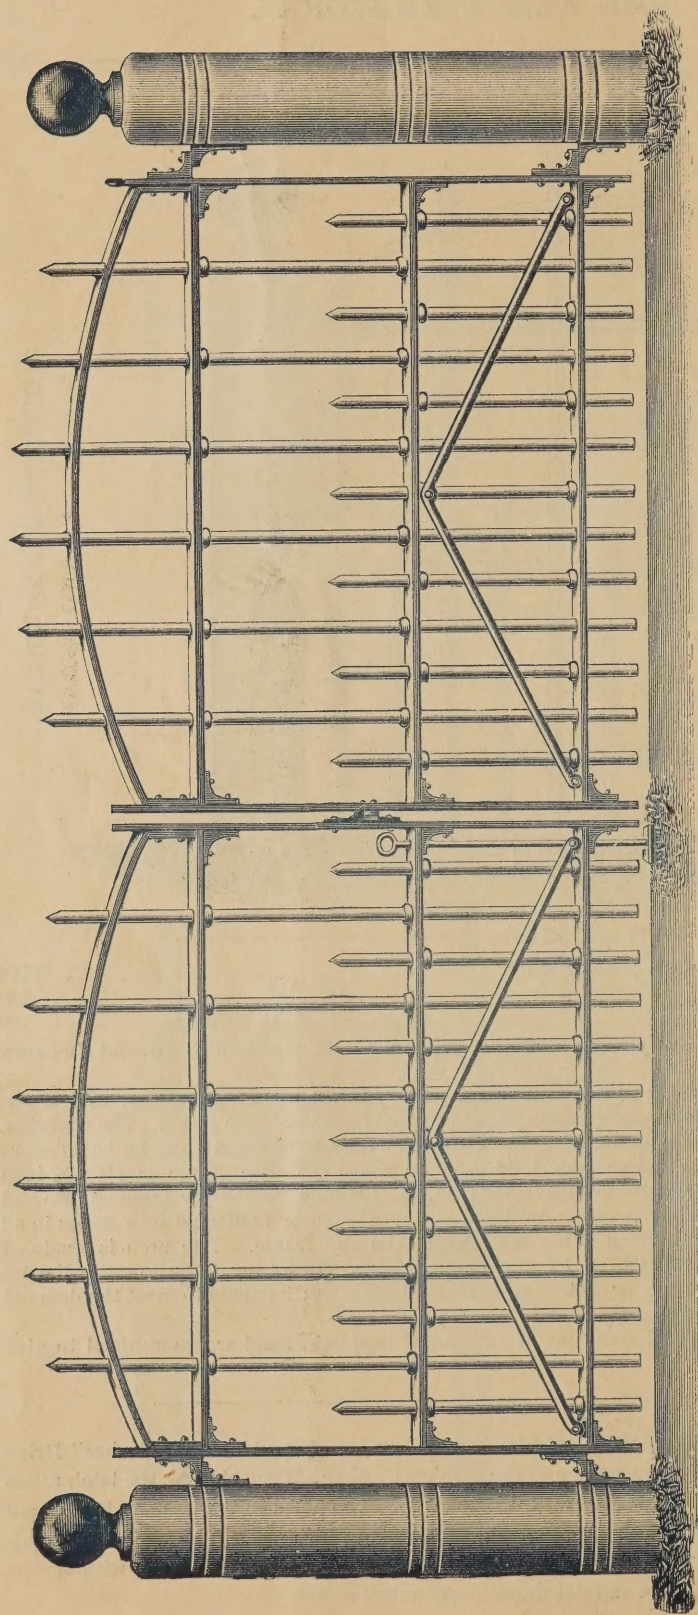

This gate is made entirely of wrought iron, in the most substantial manner. It will open either way, and is self closing. The hinges, catch, etc., are the best obtainable, and can be attached to wood, stone or iron posts. The uprights, or pickets, are 7-16 inch round iron, placed three inches apart. They are provided with our patented upset bulbs on every picket to strengthen them and securely hold them in position. The frame is $1\frac{1}{4} \times \frac{3}{8}$ inch bar iron. The horizontal rails are heavy bar iron, $1\frac{1}{4} \times \frac{3}{8}$ inch, which are tenoned into and securely riveted to the frame. For additional strength we use malleable iron knees in all corners, which are firmly riveted to the horizontal rails and frame. The arch is made of $1\frac{1}{2} \times 3$ -16 inch iron, double riveted to the frame. *They will not sag.* We do not believe a more substantial, convenient or better proportioned gate can be made to meet the demand which they are intended to supply.

These gates are painted one coat of rust proof iron paint, and are guaranteed to give satisfaction.

Enlarged illustration of latch and lock attachment for "Barbee" drive gate. See next page.

We illustrate herewith our improved latch and lock attachment for the "Barbee" Drive Gate. The illustration shows a section of the gate partly open. When closing, the latch raises in the slots and drops by its own weight into the catch. The holes in the latch and catch are then opposite each other, and the padlock may be inserted if desired. The latch is conveniently opened from either side, and holds the gate closed securely against stock without the lock. It is simple and strong, and not liable to get out of repair.

THE "BARBEE" DRIVE GATE.

No. 1.	For 36 inch fence, 8 feet 9 inches opening between posts,	\$10.00	No. 4.	For 36 inch fence, 9 feet 11 inches opening between posts,	\$12.50
" 2.	" 42 " 8 " 9 "	11.00	" 5.	" 42 " 9 " 11 "	13.50
" 3.	" 48 " 8 " 9 "	12.00	" 6.	" 48 " 9 " 11 "	14.50

Above price includes cast iron hub or center ground anchor; heavy malleable iron hinges, with eight heavy lag screws to attach hinges to posts; center bolt and our improved combination latch and lock attachment (see enlarged cut and description on preceding page). Does not include padlock. We can furnish, if desired, a substantial brass padlock and chain for 75 cents.

There has been a demand for a neat, thoroughly substantial wrought iron gate, to be used in connection with all kinds of fences, hedges, etc., that could be used with wood, stone or iron posts. This demand has been fully met by our "BARBEE" GATES, in which are combined true proportions, strength, durability, neatness and convenience. The rails and side bars in these gates are $1\frac{1}{4}$ x $\frac{3}{4}$ inch solid bar iron, the rails being tenoned into and strongly riveted to the side bars, also reinforced in strength by malleable iron knees securely riveted into each corner. Additional braces are also used, as shown in illustration. The pickets are 7-16 inch round iron placed three inches apart, and are securely held in position by means of our patented upset bulbs (see illustration), which greatly strengthen the pickets where the greatest strain is liable to come without materially increasing their weight. The arch top is $1\frac{1}{4}$ x 3-16 inch, double riveted to side bars.

This gate is the result of twelve years' experience, and a stronger and better gate for the purpose cannot be made. They will not sag or get out of repair, as all the attachments are simple, efficient and convenient. They are painted by dipping in mineral paint, which completely covers all parts and prevents rust.
